125 Westridge Pl S
Phoenixville, PA 19460

Objective:

I am interested in obtaining a lead development role, in a company, where I can mentor less senior developers in general coding practices as well as the .NET Framework and the C# language. Additionally, I am interested in continuing my success of leadership and business management skills that have proven successful in the past.

Career Info:

Security Clearance Obtained:
Top Secret SCI Clearance

Skills:

Languages

- C#, Visual Basic.NET (VB.NET), XAML
- SQL, T-SQL, XML, XSL, XSD
- ASP.NET, AJAX, HTML, XHTML, CSS, JavaScript, ASP, PHP
- .NET Framework, AJAX, SQL Reports, Active Reports, Xceed Tools, .NET Remoting

Operating Systems

- Windows Vista, XP, 2000
- Windows Server 2003, 2000
- Linux (Red Hat Enterprise, Novell Enterprise, Ubuntu)

Software

- Visual Studio .NET 2005, 2003, 2002
- Visual Studio Team Foundation Server
- SharePoint, DotNetNuke Portal, OmniPortal
- Microsoft SQL Server, MySQL, Access

Concepts

- Object Oriented Programming (OOP)
- n-Tiered Software Development
- Service Oriented Architecture (SOA)
- Modular Design

Experience:

Voveo Marketing Group

August 2007 – present

Senior Architect
Malvern, PA

- Hired to kickoff Voveo's initiative for a Technology Group to compliment their already strong Marketing Group.
- Set direction and goals for the organizational unit.
- Led the technology effort of Anything For Sale By Owner (anythingforsalebyowner.com) which is an initiative conceived by a local business man to provide a competitor to the already popular classified listing site Craigslist.

Yellow Book USA

November 2006 – August 2007

Sr. Software Engineer
King of Prussia, PA

- **Completed a 3 month task of completely re-architecting the company's geography database** which resulted in more focused search results being returned to end user and an increase in positive

feedback from the websites users.

- Responsible for choosing a REST protocol web service interface for communication between Java and .NET.
- **Wrote middleware module in C# and SQL 2000** which provided bridge between the Lucene/Java search engine via the REST protocol.
- Responsible for maintaining and enhancing the web interface of <http://yellowbook.com>.

PFPC – AdvisorPort Inc

August 2006 – November 2006

System Integrator

King of Prussia, PA

- Maintenance of AdvisorPort application which handles portfolios for large financial companies such as Morgan Stanley and JP Morgan Chase
- Database migration from daily company feeds into SQL server 2000 backend.
- Stored Procedure and VB.NET 2.0/ASP.NET modifications, bug fixing, and other development.

LA Weight Loss Franchise Company

August 2005 – August 2006

Head of Software Development

Senior/Lead Software Developer

Horsham, PA

- **Lead a team of C# developers** to create from scratch a multi-national point of sale application in less than 4 months with successful new point releases each quarter.
- In 10 months time, since August 2005, my team has **developed a fully enterprise ready application**, called SlimPOS, that allows the franchises to track client, employee, and business related metrics in C# 2.0.
- The SlimPOS application is currently **deployed in over 200 centers worldwide** and is expected to grow to 450 centers by the end of the year, and **currently handles \$650 million worth of sales a year**. Over a billion dollars to date.
- I developed the SlimPOS application around a minimalist user interface design to create an interface that even the most computer illiterate person could use intuitively with minimal training.
- The SlimPOS application made **heavy use of .NET Remoting, in C#**, to accomplish communication between the client application and server application to keep the data in sync.
- The SlimPOS application uses a Windows Service that I designed called ActiveUpdate, that **replicates the data to the corporate headquarters using a Web Service** that I also designed called SlimPost.
- That data is then reported and interacted with at the corporate headquarters using the SlimNet application that was written in ASP.Net and C#.
- **Successfully rolled out Visual Studio Team Foundation Server (TFS)** to help facilitate good software development practices in my team as well as provide comprehensive bug tracking for the application developed in house.

Integrated Media Concepts

May 2005 – July 2005

Application Developer

www.imcinteractive.com

Wilmington, DE

- During my contract term at IMC I was placed as Directory of Technology on two different teams.
- Successfully finished a project as Director of Technology for a team that was contracted to help a client, in King of Prussia, PA, **re-architect a proprietary backend system based on old Perl scripts to a new system based off of Mono/.NET on a RedHat Linux architecture.**
- During the two months at IMC I helped them define a couple internal applications that needed to be reworked for the company to grow. My recommendation was to move from a spreadsheet based system to a system based on Microsoft Project Server 2003.

Lockheed Martin

October 2003 – May 2005

Information Systems and Solutions

Commercial Software Engineer

King of Prussia, PA

- Developed a web-based management application, in C# and ASP.NET, with a peer developer and one part-time DBA, using SQL Server 2000, for individualized management and strategic positioning of employees with interest in becoming organization leaders.
- Team was awarded a Special Recognition Award from the VP of Operations and IT for work done on the project.
- I took the lead on making sure the system was secure by implementing role-based authentication, which led to a shorter development cycle.
- Solely responsible for the user interface of the web application, using CSS and XHTML. I had to make sure that it fitted the business needs, and as a direct result fitted the average users' needs.
- Project came in under budget and ahead of schedule, because of the diligent work from the team effort.
- Tasked to develop a printing system for a smart client application using C#, which was a critical part of the user's process when using the application. The printing component was designed for printing raw data from proprietary sources into a common format.
- As a result I was able to drastically reduce the old printing system that included 30+ files of code down to two files that were more manageable and streamlined to the processes of the smart client application. The new code provided the same functionality, look, and feel, as the old code; however it was more maintainable with my design.
- Acted in a supporting role at the Pennsylvania State Police Call Center in Harrisburg.
- Documented any problems that may arise in a concise manor to allow evaluation by the Software Vendor.

OmniPortal

May 2002 – Present

Chief Software Architect

www.omniportal.net

- Designed and implemented a modular ASP.Net Web Framework using the C# programming language, ASP.NET, and the .NET Framework.
- The OmniPortal framework is currently in use by many companies that were in need a fast and quick, to setup, internal website.
- Currently OmniPortal is mainly used for Customer Relationship Management (CRM) and Content Management System (CMS) deployment.

- The OmniPortal framework provides a secure architecture for the development and implementation of modular applications.
- OmniPortal was designed by me to manage everything except the business processes that are normally deployed as single web pages. It was designed to manage security by using a combination of task and role based security.

E-Tech Solutions

July 2003 – September 2003

.Net Development Architect

www.etechsolutions.com

Eagle, PA

- Solely responsible for designing and developing an ASP.Net interface to manage the companies new Cold Fusion CRM venture.
- Helped setup and maintain Exchange, Windows 2000/2003, Microsoft SQL 2000, and Network for company of 30 people.

Lockheed Martin

January 2002 – August 2002

Engineering Co-Op

Newport News, VA & Syracuse, NY

- Solely responsible, in team of 20, for design and development of an interface definition and hardware/equipment acquisition database in C#, ASP.NET, and Access.
- In participation with Senior Software Engineer, conducted performance tests and security tests on a Linux system running multiple VMware Clients according to NSA test-specifications.
- In participation with peer engineer conducted research and design of server consolidation for a Nimitz Class Aircraft Carrier.
- Collaborated with knowledge management design project manager to interpret and apply emerging SCORM, AICC, and IMS standards to large-scale e-learning implementation.
- Provided tactical advice and troubleshooting to diverse groups of technology stakeholders and business decision-makers.
- Key role in evaluating and recommending enterprise-level solutions for implementation with major government clients.
- Served as liaison among content/media designers, software, systems engineers, and management to enhance cross-functional communication regarding technology applications.

Education:

The Pennsylvania State University – University Park

Bachelors of Science (BS) in Information Science and Technology

Focus in Software Design and Development

Graduated May 2003

Leadership:

Voveo Marketing Group

August 2007 – present

- Successfully lead the kickoff of Voveo Technology Group and help set the direction and the goals of the organizational unit.

LA Weight Loss Franchise Company

August 2005 – August 2006

- Successfully lead a team in developing a multi-national point of sale application that reported data back to the corporate headquarters with the replication technology invented in house.
